

PATCH MANAGEMENT

Stay ahead of attacks with quick, reliable vulnerability patching.

**FULLY
COMPATIBLE**

Patch any software on Windows, Mac, and Linux

Organizations can take up to 102 days to deploy security patches

**MINIMAL
IMPACT**

Download & install patches without alerting users

On average, cyber criminals weaponize new critical vulnerabilities within 7 days

Security patching can reduce an organization's attack surface by up to

**EXPERT
MANAGEMENT**

Security experts monitor & manage software updates

Be **faster** than cyber criminals.

Make your organization a **smaller target**.

AUTOMATED PATCHING MANAGED BY EXPERTS

Apply security patches as they are released or define a unique patching schedule to fit your needs. Your team of Infogressive Security Engineers will take care of the rest. Secure vulnerabilities in your operating systems, common business applications, and even 3rd-party software or custom configurations.

REDUCE ATTACK SURFACE

Known vulnerabilities are an open door for cyberattacks — and attackers use that to their advantage. Regular, timely security patching is key to keeping your attack surface small and eliminating many of the easy ways into your network.

DECREASE TIME TO REMEDIATE

Experts recommend that organizations apply zero-day security patches within 24 hours and all other critical security patches within 72 hours. Patch Management not only makes those timelines possible — it makes them easy.

SECURE REMOTE WORKFORCES

Patch remote endpoints with ease — *anywhere*. Whether you have team members who work from home or on the go, Patch Management allows you to seamlessly deliver security updates without relying on physical, on-premises solutions or the speed of your corporate VPN.

LOW IMPACT, HIGH REWARD

Patch Management capabilities are delivered to your endpoints via a single lightweight agent, updates are unobtrusive, and required restarts can be scheduled to reduce disruption. Your users will be more secure than ever... and they won't even notice.
